

After Move-in Checklist

The boxes are open. You have food in the fridge.
Now, tackle a few critical “to do’s” once you’ve moved in.

1. COMPLETE A HOME INSPECTION

If you did not complete a home inspection prior to close, consider hiring a licensed home inspector to identify areas of concern. This helps you prioritize repairs and remodeling.

2. TEST THE HOME FOR RADON

Radon is the #1 cause of lung cancer in nonsmokers, resulting in over 21,000 deaths annually. The only way to know whether a home has hazardous levels of radon gas is to test. A DIY test can be purchased online or at any hardware store. Some home inspectors even test for radon. If the test reveals unsafe levels of radon, have SWAT Environmental install a radon mitigation system immediately.

3. LOCATE THE FUSE BOX, GAS SHUTOFF AND MAIN WATER SUPPLY SHUT OFF

In case of an emergency, it is important to know where the main utility controls are in your home. Label all main controls for easy access.

4. UPDATE YOUR ADDRESS

Request a change of address at the post office and the DMV. Don't forget to change your address with financial, personal, wellness, and community organizations.

5. CONFIRM ALL UTILITIES AND HOME SERVICES HAVE BEEN ESTABLISHED IN YOUR NAME

As the new homeowner, you want to ensure that utility service is not disrupted and that all billing and contact information is accurate.

6. CHANGE LOCKS AND SET UP SECURITY

Keep your home safe by installing a security system and new door and window locks.

Protect your home from harmful radon gas.

Radon is a naturally occurring, odorless, colorless gas that becomes trapped in your home and compromises the air your family breathes. You can't see or smell it. The only way to know whether a home has hazardous levels of radon gas is to test. For over 30 years, SWAT Environmental's radon mitigation experts have safely reduced radon in neighborhoods just like yours.
